NGUYEN DUC HUY
Junior Backend Developer

Currently, I'm 21 years old. With more than 1 year of practical experience gained as a freelancer and intern at companies, I believe I am capable of taking on and completing tasks. Complete assigned tasks in the most complete way. I want to work as a Backend Developer where I can apply knowledge and skills to handle work. At the same time, further promote your own expertise to contribute to the company's development in the coming years. Hopefully the working environment at the company will help me equip myself with more experience and skills to achieve my goal of becoming a web programmer while working at the company.
